

Sophos Cloud

Quickly and easily secure all your endpoints, web, and mobile devices

Sophos Cloud is the only security solution for Windows, Mac, and mobile devices that integrates endpoint antivirus, mobile device management, and server protection together into a seamless solution. With a simple, intuitive user experience, Sophos Cloud is effortless to deploy, manage and maintain.

Highlights

- Secure Windows, Mac, and mobile devices with a single integrated solution
- Next-Gen Endpoint protection with Malicious Traffic Detection
- User-based management, reporting, and licensing
- Cloud-managed—be up and running instantly
- Protects users and enforces policy across devices, on or off the network
- Automatic software upgrades, threat updates and real-time policy refresh

Integrated protection, unified console

Sophos Cloud sets the standard for how IT security should be managed—simply and effectively. Sophos Cloud brings endpoint, mobile, server, and web control together in a single, integrated management console—a first in the industry. You'll have your user devices, servers and your organization secure in literally minutes. The intelligent dashboard and extensive reports provide you clear visibility and actionable information.

Simply effective protection

User-based security policies follow the user across devices, platforms, and locations, while server-based policies provide granular control to balance performance and protection. Sophos threat protection employs the latest technologies such as web reputation, code emulation, and Malicious Traffic Detection as well as HIPS and buffer overflow protection, and much more. Our protection is backed by the Sophos Labs global network of threat research centers, which keeps you one step ahead of the threats with automatic updates and real-time lookups of suspicious content.

High-performance server protection with One-click Lockdown

Sophos Cloud Server Protection is the only solution offering cloud-managed server protection integrated with advanced anti-malware, HIPS and server application whitelisting/lockdown. Effectively protect your servers and data from zero-day attacks.

By clicking a button, you can lock down your servers in a safe state. Server Authority automatically establishes and manages trusted changes, simplifying on-going maintenance as well. In addition, Sophos Cloud automatically recognizes your server applications and adapts the configurations and automatically sets scanning exclusions.

BYOD and MDM made easy

Mobile device management (MDM) in Sophos Cloud enables mobility for your users, keeping them productive—and your corporate data secure—on the move. With one policy you can set up Wi-Fi and email access and enforce security settings. And, you get clear visibility on all devices and policies from a single, unified management console.

Promote safe and productive web usage with Web Control

Web Control makes it easy to enforce safe and productive web usage, whether your users are at work, at home, or on the road. Predefined policies let you easily set policies to address security and compliance requirements. You can also set time-based policies to limit nonbusiness-related browsing during business hours. Effortlessly enforce web-filtering policies at the endpoint; no need for proxy servers, VPNs, or application-specific configuration.

Customize protection to best suit your needs

Sophos Cloud provides unified security from one management console. At the same time, we offer the packaging flexibility so you can choose the features and functions that best fit your business needs.
